## TAYLOR INSTITUTE FOR TEACHING AND LEARNING IS NAMED A TOP PROJECT OF THE YEAR

Calgary, Alta.- December 10, 2015 - The Taylor Institute for Teaching and Learning was honoured by Alberta Construction Magazine as one of the Top Projects of the year in Alberta. The project was awarded **Top Institutional Project under \$50M**, as well as the **Institutional Design Project of the Year**.

The Taylor Institute for Teaching and Learning has made a huge statement as the winner in several categories at these prestigious awards, and rightfully so! The building is not a typical academic facility; it combines a number of unique structural and building elements and marries them with advanced technologies and systems contained within the structure.

Built on the foundations of the original Nickel Arts Museum that stood in its place prior to construction, the building features components for educational development, research and experimental hands on learning spaces.

CANA is proud to have been involved on this one-of-a-kind building and to have delivered it well ahead of schedule and on budget to the owner, The University of Calgary.

Congratulations to The University of Calgary, the consultant team led by Gibbs Gage Architects and Diamond Schmitt Architects and the entire construction team on winning these awards.

More information on this Top Project and others is available at [www.albertaconstructionmagazine.com](http://www.albertaconstructionmagazine.com) or in the Winter issue of the magazine.
